This sale includes the very best quality of black Altman voile skirts in pleated styles; beautifully trimmed; all sizes and the very choicest styles to select from.

The Daily Market Report

PORTLAND, June 27.—Best quality cherries are just beginning to come in, the first important consignment of fancy Royal Annes arriving today from The Dalles. For Oregon the cherry season proper will soon open next week, then for a period of several weeks cherries will be one of the most important features of the fruit market.

Cherry shipments from California to this market came practically to an end a week ago, since which time the local trade has been supplied generally with poor to medium grades of fruit from various sections of the state, for the most part, however, as good fruit as that which came from farther south. With other fruits, the first offerings of which were under grade, the cherry trade has so far been slow, but with fancy fruit coming in freely from Oregon orchards soon, and the strawberry crop disposed of, trade is sure to be more active.

Chickens yesterday and today moved a little better than earlier in the week, but the demand was not strong enough in any line to make an active market, and, though occasional sales of fancy hens at 12 cents were reported, prices generally were about the same as ruled early in the week. Geese are very slow at 12 to 14 cents. No geese are coming in and none are wanted. There is a limited demand for turkeys, but there are practically none in the market.

Flour, Grain and Feed.
Wheat—Track prices: Club, 85c; red Russian, 83c; bluesteam, 87c; Valley 85c.

Turpentine—In cases, 63c; in wood barrels, 61c; in iron barrels, 59c; in 10-case lots, 62c.

ICE MADE IN HOME KITCHEN.

The problem of producing ice in small quantities quickly and cheaply has apparently been solved by a French inventor, who has perfected a machine which is cheap, simple of operation, practically everlasting, and thoroughly practical. It may be operated by a belt connected with a steam engine, by a small electric motor, or by hand cranks.
The invention is a rotative compression and automatic machine, regulating itself to all speeds, whatever may be the temperature of the condensing water used. The important feature is a cylinder in which the chemicals are sealed—the latter not requiring renewal and lasting as long as the machine itself—and which, revolving in water, produces the ice. It can also produce cold air.
The machine has no joint piece, no pressure gauge, no suction or regulating valve. It will work in water

reaching even 113 degrees Fahrenheit, and saves ninety-eight per cent of cooling water and seventy per cent of motive power as compared with any other freezing machine known.

The Germans have also a new freezing device especially adapted to household and field hospital use. It is very simple, and could be manufactured for about one dollar. It consists merely of a double wall tin vessel with a capacity of five gallons. The hollow space between the two walls is about an inch across. By the gradual admission of carbonic acid into this hollow space through an opening at the bottom, and from there to the vessel proper through a cross arm tube, it is claimed that water may be converted into ice in the space of sixty seconds, and that meats, fruits, and beverages, such as beer or wine, may be chilled or frozen in a few seconds. This effect is produced by the sudden great reduction of temperature caused by the rapid expansion of the carbonic acid, which is admitted from an ordinary carbonic acid reservoir.—Technical World Magazine.

NOTICE.

Union Gas Engine Company.
Mr. C. H. Carlson has been appointed local agent for the Union Gas Engine Company for Astoria and Lower River territory with headquarters at Astoria. A full line of repair parts will be carried in stock at 591 Exchange street, Astoria, by Mr. Carlson, who is also equipped to do repair work on Union Engines at short notice in a first-class manner. **UNION GAS ENGINE COMPANY, F. P. Kendall, General Sales Agent.**
Portland, Oregon, June 1, 1908.
